

Amendment to the Specification

Amend the last paragraph on page 6 to read as follows:

The effective substitutes for the sprays are limited. Under the current understanding of sprayable nasal decongestants, one either uses phenylephrine or oxymetazoline. With the withdrawal of phenylpropanolamine~~phenylpropylene~~ from the market, the only effective oral (pill) decongestant is pseudoephedrine. In the lexicon, both topical and oral decongestants are the same.
